## SWIMMING REACTION LIGHTS

(<http://reactionlights.com>)

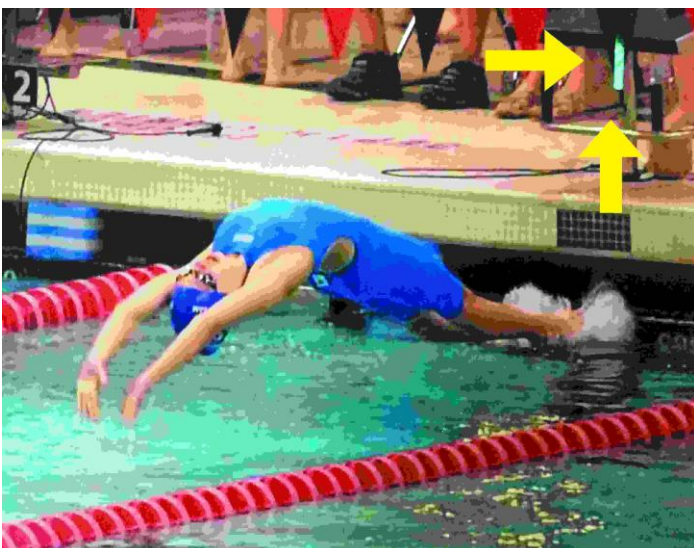

All lights commands are the same as those commands currently used in any meet.

**RED LIGHTS** – are used to tell the swimmer to get up on the block or to get into the water and get in the “READY POSITION”. These lights are controlled **MANUALLY** by a control button; or wireless fob in a hand, or a **SPECIAL STARTING MICROPHONE**. They stay on until the **Blue lights** are activated.

**BLUE LIGHTS** – are used to tell the swimmers to “TAKE YOUR MARK” in a racing position. These lights are activated **MANUALLY** by a control button or wireless fob or a **SPECIAL STARTING MICROPHONE** in a hand of the starting official. They stay on until the **green light** is activated.

**GREEN lights** - are used to tell the swimmers to “GO” These lights are controlled **AUTOMATICALLY** by the starting official when pushing the start button function on the microphone and work’s simultaneously with the start system and timing system.

**Solid GREEN light** = “GO” by starter’s start button. The race has started.

In Partnership with “**INNOVATION ONE**” of  
**TRINE UNIVERSITY**”

**Well Proven and Tested by Many Large Swimming Organizations around the World**

Patented – One Year Warranty – Fits Most Starting Platforms – 12 Volt DC

**FOR INFORMATION** – 315-331-6293 or
